Subject: Harlan County Reservoir Level

Good Morning Kenny,

Looks as if we ended the month of May .01 foot lower than we started the month in 1992 without any releases being made from Harlan County Dam. Also, in 2004 we gained only .04 foot during the month of May.

Not sure if you have heard but the adjusted shutoff elevation for Harlan County Lake based on the actual end of May storage is 1927.52 feet. This is down from the estimated shutoff of 1930.50 feet in January. Harlan County inflow totaled only 17,472 acre-feet from January through May. Will be sending you a letter this week on the adjusted shutoff.

Bill
