Hi Kenny

As we embark on another season I would like to ensure that a coordinated effort occurs between you and Bill and his group in regards to the operations of your system. Of particular interest is Lovewell. We are planning on cleaning the inlet above the gate structure and it has to be at 1577.0 or lower at the end of the irrigation season. Lower is better.

I would like there to be at a minimum a weekly call between you and Water Operations to discuss releases and target elevations in Lovewell as we proceed thru the season.

Thanks and let me know of any comments or concerns.

Marv

Good Morning Kenny,

Dale and Dave have been to Guide Rock, 15.1, 34.8 and 38.0 at least a couple of times in the past few weeks. For the most part everything is ready, we have a few wires to replace at 38.0 that seem to corrode every year and we are setting a new gaging house up at 34.8 (should be completed today). Thanks for the heads up.

Bill

Along with starting CC at Guide Rock, I will want to start lower CC next week. Is everything ready?

Kenny
