**KANSAS DEPARTMENT OF AGRICULTURE**  
**Division of Water Resources**

**M E M O R A N D U M**

**TO:** Files

**DATE:** October 3, 2016

**FROM:** Doug Schemm

**RE:** Application File No. 49,077

Ronnie Neises has filed the above referenced new application proposing to appropriate 162 acre-feet of groundwater at a diversion rate of 800 gallons per minute for irrigation use. The initial application had requested 200 acre-feet, however this quantity was reduced to 162 acre-feet in order to comply with remaining safe yield quantity of water, and the applicant agreed to this reduction during a September 13, 2016 phone call. In addition, the well location was modified to improve safe yield calculations. The proposed well is to be located in the Northwest Quarter of the Northwest Quarter of the Southwest Quarter of Section 28, Township 31 South, Range 2 East, Sumner County, within the drainage basin of the Arkansas River. There are no other water rights overlapping the point of diversion or place of use. The proposed acreage is entirely owned by Marcia E Maybrier Trust. The applicant has signed the application form stating he has legal access to the point of diversion.

Initial safe yield reviews indicated only a portion of the requested quantity of water was available in this area of consideration, and the applicant was informed of these calculations. Note that the extent of the alluvial aquifer used for safe yield evaluation was consistent with senior file processing in this local area (see File Nos. 48,559 and 48,651). Topographic map review indicates that the alluvial deposits do not extend into the south and southwest portions of the 2-mile circle. The applicant subsequently requested that DWR staff review a report originally prepared for Application, File No. 46,145 (Jim Neises), dated March 9, 2007. This application was located in the Southeast Quarter of Section 30, Township 31 South, Range 2 East, approximately one mile away (to the west) from this pending application. The report contains multiple test hole logs, as well as the results of an aquifer pumping test. The report concluded that the aquifer at this location was Illinoisan or Kansan terrace deposits, with a saturated thickness of approximately 20 feet. Based on the information contained in this report, the applicant's opportunity to submit additional information per K.A.R. 5-3-18, and the definition of safe yield that includes hydraulically connected groundwater, it was determined that the area of consideration could be increased to encompass these terrace deposits. Please note that this safe yield is specific to this location only and any other location would have to be supported by similar hydrologic data provided by the applicant.

In 2004 the United States Geological Survey (USGS) completed a hydrologic model of a portion of the Arkansas River and associated drainage basins (Ninnescah River), generally bounded by Ranges 2 West to 3 East and Townships 26 South to 34 South (near state line). The USGS model indicated that the aquifer in this area receives more recharge from precipitation than DWR has historically used in safe yield calculations. The data and analyses are detailed in the USGS Scientific Investigations Report 2004-5204 entitled "Characterization and Simulation of Flow in the Lower Arkansas River Alluvial Aquifer, South-Central Kansas". In order to evaluate the potential impact of this study on our safe yield calculations, DWR suspended processing applications for new appropriations of water in the model area.

DWR staff completed an evaluation of the USGS model and determined that the precipitation recharge value of 5.4 inches per year that is used in the USGS model is reasonable and appropriate. In order to reserve water in the alluvial aquifers that can contribute to base flow to area streams and for domestic use, it was determined that 75 percent of the 5.4 inches of precipitation recharge shall be available for appropriation. This is consistent with safe yield appropriation in many other basins across the state, and is the current percent available in for all applications in the Ninnescah River drainage basin. Therefore, for all pending applications within the model area, safe yield will be evaluated using the standard methodology in K.A.R. 5-3-11, which is based on the extent of the unconfined aquifer (area of consideration), a Potential Annual Recharge value of 5.4 inches, and a percent of recharge available for appropriation of 75%. Current annual recharge across the model area is approximately 3 inches.

Per the requirements in K.A.R. 5-3-11, safe yield is determined by the extent of the unconfined aquifer within a two-mile circle radius of the point of diversion, which establishes the area of consideration. For this application, the area of consideration (alluvial aquifer) provided an area of consideration of 5,703 acres (see discussion above regarding the alluvial aquifer). With a potential annual recharge of 5.4 inches, and 75% of recharge available for appropriation, safe yield was determined to be 1,924.8 acre-feet. Existing water rights have appropriated 1,762.9 acre-feet, providing a difference of 162 acre-feet available for appropriation, and the application reduced to 162 acre-feet complies with safe yield.

The applicant identified three domestic wells within one-half mile of the proposed well. Nearby well owner letters were sent to the well owners on September 13, 2016. No responses of any kind were received. According to the WRIS database, the nearest non-domestic point of diversion is located over 2,750 feet away. The site map indicates that the nearest domestic well is over 1,800 feet away. The proposed point of diversion meets minimum well spacing to all existing wells. Per the requirements in K.A.R. 5-4-4 for all other aquifers, the minimum well spacing should be one-quarter mile to all other non-domestic wells and 660 feet to domestic wells.

In accordance with K.S.A. 82a-706c, the Chief Engineer retains full authority to require any water user to install meters, gages, or other measuring devices, which devices he or she or his or her agents may read at any time. Water flowmeter requirements are further described in K.A.R. 5-1-4 through K.A.R. 5-1-12. If any chemical or foreign substance is injected into the water pumped under this permit, a check valve will also need to be installed. A water level measurement tube is required because the rate of diversion will exceed 100 gpm.

In a September 20, 2016 e-mail, Jeff Lanterman, Water Commissioner, Stafford Field Office, stated that the referenced application be approved.

Based on the above discussion, that the area is open to new appropriations for groundwater, the proposed appropriation of water appears reasonable, the application complies with minimum well spacing and safe yield criteria, and there is no evidence that senior rights will be impaired, it is recommended that the referenced application be approved.

Re: Appropriation of Water, File No. 49,077

**FILE COPY**

Dear Mr. Neises:

There is enclosed a permit to appropriate water authorizing you to proceed with construction of the proposed diversion works (except those dams and stream obstructions regulated by K.S.A. 82a-301 through 305a), to divert such unappropriated water as may be available from the source and at the location specified in the permit, and to use it for the purpose and at the location described in the permit.

Your attention is directed to the enclosures and to the terms, conditions, and limitations specified in these approval documents. A water meter is required on the proposed diversion works and you must install it prior to water being put to beneficial use in order for you to maintain accurate records of water use. The meter should be used to provide the information required on the annual water use report.

Failure to notify the Chief Engineer of the Division of Water Resources of the completion of the diversion works within the time allowed, or within any authorized extension of time thereof, will result in the dismissal of this permit. Enclosed is a form which may be used to notify the Chief Engineer that the proposed diversion works have been completed.

All requests for extensions of time to complete diversion works, or to perfect appropriations, must be submitted to the Chief Engineer before the expiration of time originally set forth in the permit to complete diversion works or to perfect an appropriation. If for any reason, you require an extension of time, you must request it before the expiration of time set forth in this permit. Failure to comply with this regulation will result in the dismissal of your permit or your water right. Any request for an extension of time shall be accompanied by the required statutory fee, which is currently \$100.00.

There is also enclosed an information sheet setting forth the procedure to obtain a Certificate of Appropriation which will establish the extent of your water right. If you have any questions, please contact our office. If you wish to discuss this specific file, please have the file number ready so that we may help you more efficiently.

Sincerely,

Brent A. Turney, P.G.

**APPROVAL OF APPLICATION**      **FILE COPY**  
**and**  
**PERMIT TO PROCEED**

(This is not a Certificate of Appropriation)

This is to certify that I have examined Application, **File No. 49,077** of the applicant

**RON NEISES**  
**409 N ROCK RD**  
**BELLE PLAINE KS 67013**

for a permit to appropriate water for beneficial use, together with the maps, plans and other submitted data, and that the application is hereby approved and the applicant is hereby authorized, subject to vested rights and prior appropriations, to proceed with the construction of the proposed diversion works (except those dams and stream obstructions regulated by K.S.A. 82a-301 through 305a, as amended), and to proceed with all steps necessary for the application of the water to the approved and proposed beneficial use and otherwise perfect the proposed appropriation subject to the following terms, conditions and limitations:

1. That the priority date assigned to such application is **May 12, 2014**.
2. That the water sought to be appropriated shall be used for irrigation use on land described in the application, as follows:

Sec.	Twp.	Range	NE¼				NW¼				SW¼				SE¼				TOTAL
			NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	
28	31S	2E								33	33	33	33					132	

3. That the authorized source from which the appropriation shall be made is groundwater, to be withdrawn by means of one (1) well located in the Northwest Quarter of the Northwest Quarter of the Southwest Quarter (NW¼ NW¼ SW¼) of Section 28, more particularly described as being near a point 2,393 feet North and 4,934 feet West of the Southeast corner of said section, in Township 31 South, Range 2 East, Sumner County, Kansas, located substantially as shown on the topographic map accompanying the application.

4. That the appropriation sought shall be limited to a maximum diversion rate not in excess of **800 gallons per minute** (1.78 c.f.s.) and to a quantity not to exceed **162 acre-feet** of water for any calendar year.

5. That installation of works for diversion of water shall be completed on or before **December 31, 2017**, or within any authorized extension thereof. The applicant shall notify the Chief Engineer and pay the statutorily required field inspection fee, which is currently \$400.00, when construction of the works has been completed. Failure to timely submit the notice and the fee will result in revocation of the permit. Any request for an extension of time shall be accompanied by the required statutory fee, which is currently \$100.00.

6. That the proposed appropriation shall be perfected by the actual application of water to the proposed beneficial use on or before **December 31, 2021**, or any authorized extension thereof. Any request for an extension of time shall be submitted prior to the expiration of the deadline and shall be accompanied by the required statutory fee, which is currently \$100.00.

7. That the applicant shall not be deemed to have acquired a water appropriation for a quantity in excess of the amount approved herein nor in excess of the amount found by the Chief Engineer to have been actually used for the approved purpose during one calendar year subsequent to approval of the application and within the time specified for perfection or any authorized extension thereof.

8. That the use of water herein authorized shall not be made so as to impair any use under existing water rights nor prejudicially and unreasonably affect the public interest.

9. That the right of the appropriator shall relate to a specific quantity of water and such right must allow for a reasonable raising or lowering of the static water level and for the reasonable increase or decrease of the streamflow at the appropriator's point of diversion.

10. That this permit does not constitute authority under K.S.A. 82a-301 through 305a to construct any dam or other obstruction; nor does it grant any right-of-way, or authorize entry upon or injury to, public or private property.

11. That all diversion works constructed under the authority of this permit into which any type of chemical or other foreign substance will be injected into the water pumped from the diversion works shall be equipped with an in-line, automatic quick-closing, check valve capable of preventing pollution of the source of the water supply. The type of valve installed shall meet specifications adopted by the Chief Engineer and shall be maintained in an operating condition satisfactory to the Chief Engineer.

12. That an acceptable water flow meter shall be installed and maintained on the diversion works authorized by this permit in accordance Kansas Administrative Regulations 5-1-4 through 5-1-12 adopted by the Chief Engineer. This water flow meter shall be used to provide an accurate quantity of water diverted as required for the annual water use report (including the meter reading at the beginning and end of the report year).

13. That the applicant shall maintain accurate and complete records from which the quantity of water diverted during each calendar year may be readily determined and the applicant shall file an annual water use report with the Chief Engineer by March 1 following the end of each calendar year. Failure to file the annual water use report by the due date shall cause the applicant to be subject to a civil penalty.

14. That no water user shall engage in nor allow the waste of any water diverted under the authority of this permit.

15. That failure without cause to comply with provisions of the permit and its terms, conditions and limitations will result in the forfeiture of the priority date, revocation of the permit and dismissal of the application.

16. That the right to appropriate water under authority of this permit is subject to any minimum desirable streamflow requirements identified and established pursuant to K.S.A. 82a-703c for the source of supply to which this water right applies.

17. That the applicant shall submit to the Chief Engineer a copy of the well log required by the Kansas Department of Health and Environment under the authority of K.S.A. 82a-1212, currently form WWC-5, within 30 days following the drilling of the well at the location authorized herein.

This Order shall become a final agency action, as defined by K.S.A. 77-607(b), without further notice to the parties, if a request for hearing or a petition for administrative review is not filed as set forth below.

Request for Hearing. According to K.A.R. 5-14-3(c), any party who desires a hearing must submit a request within 15 days after the date shown on the Certificate of Service attached to this Order. Filing a request for a hearing will give you the opportunity to submit additional facts for consideration, contest any findings made by the Chief Engineer, or present any other information you believe should be considered in this matter. A timely-filed request for hearing will stay the deadline for requesting administrative review of this Order pending the outcome of the hearing.

Petition for Review. The applicant, if aggrieved by this Order, may petition for administrative review, pursuant to K.S.A. 82a-711(c) and K.S.A. 82a-1901(a). The petition must be filed within 30 days after the date shown on the Certificate of Service attached to this Order and must set forth the basis for the review, unless stayed by the timely filing of a request for hearing.

Any request for hearing or petition for administrative review shall be in writing and shall be submitted to the attention of: Chief Legal Counsel, Kansas Department of Agriculture, 1320 Research Park Drive, Manhattan, Kansas 66502, Fax: (785) 564-6777.

Good Morning,

I have described how we determined the safe yield area of consideration and that any such review will require detailed hydrologic investigation and reporting by the applicant.

Thanks, Doug

This item to be completed by the Division of Water Resources.

WATER RESOURCES  
RECEIVED

APPLICATION FOR PERMIT TO  
APPROPRIATE WATER FOR BENEFICIAL USE  
Filing Fee Must Accompany the Application  
(Please refer to Fee Schedule attached to this application form.)

MAY 12 2014  
1:20pm  
KS DEPT OF AGRICULTURE

To the Chief Engineer of the Division of Water Resources, Kansas Department of Agriculture,  
109 SW 9<sup>th</sup> Street, Second Floor, Topeka, KS 66612-1283:

1. Name of Applicant (Please Print): Ronnie M Neises  
Address: 409 N. Rock Rd.  
City: Belle Plaine State KS Zip Code 67013  
Telephone Number: (620) 229-3334

2. The source of water is:  surface water in \_\_\_\_\_ (stream)  
OR  groundwater in Lower Arkansas River (drainage basin)

Certain streams in Kansas have minimum target flows established by law or may be subject to administration when water is released from storage for use by water assurance district members. If your application is subject to these regulations on the date we receive your application, you will be sent the appropriate form to complete and return to the Division of Water Resources.

3. The maximum quantity of water desired is 162 AF \* 200 acre-feet OR \_\_\_\_\_ gallons per calendar year, to be diverted at a maximum rate of 800 gallons per minute OR \_\_\_\_\_ cubic feet per second.

Once your application has been assigned a priority, the requested maximum rate of diversion and maximum requested quantity of water under that priority number can **NOT** be increased. Please be certain your requested maximum rate of diversion and maximum quantity of water are appropriate and reasonable for your proposed project and are in agreement with the Division of Water Resources' requirements.

4. The water is intended to be appropriated for (Check use intended):  
(a)  Artificial Recharge (b)  Irrigation (c)  Recreational (d)  Water Power  
(e)  Industrial (f)  Municipal (g)  Stockwatering (h)  Sediment Control  
(i)  Domestic (j)  Dewatering (k)  Hydraulic Dredging (l)  Fire Protection  
(m)  Thermal Exchange (n)  Contamination Remediation

YOU **MUST** COMPLETE AND ATTACH ADDITIONAL DIVISION OF WATER RESOURCES FORM(S) PROVIDING INFORMATION TO SUBSTANTIATE YOUR REQUEST FOR THE AMOUNT OF WATER FOR THE INTENDED USE REFERENCED ABOVE.

For Office Use Only:  
F.O. 2 GMD 2 Meets K.A.R. 5-3-1 (YES/NO) Use IR Source S County SU By AGL Date 5-12-14  
Code RE2 Fee \$ 300 TR # 14047990 Receipt Date 5-12-14 Check # 3653

DWR 1-100 (Revised 02/04/2013)

\* Reduced Quantity to 162 Acre-feet to meet safe yield. Applicant agreed in 9/13/16 phone discussion. SCANNED 5-13-14 DSS DWS/DWR

\* Modified well location to improve safe yield

Quantity (i.e. senior Files out of Area of Consideration), File No. 49,077

Applicant agreed to revised well location in 9/13/16 phone discussion.

5. The location of the proposed wells, pump sites or other works for diversion of water is:

Note: For the application to be accepted, the point of diversion location must be described to at least a 10 acre tract, unless you specifically request a 60 day period of time in which to locate the site within a specifically described, minimal legal quarter section of land.

- (A) One in the ~~NW~~ <sup>\* NW</sup> quarter of the ~~Near Center~~ <sup>\* NW</sup> quarter of the SW quarter of Section 28, more particularly described as being near a point ~~1726~~ <sup>2393</sup> feet North and ~~3960~~ <sup>4934</sup> feet West of the Southeast corner of said section, in Township 31 South, Range ~~2 East~~ <sup>2 West</sup> (circle one), Sumner County, Kansas.
- (B) One in the \_\_\_\_\_ quarter of the \_\_\_\_\_ quarter of the \_\_\_\_\_ quarter of Section \_\_\_\_\_, more particularly described as being near a point \_\_\_\_\_ feet North and \_\_\_\_\_ feet West of the Southeast corner of said section, in Township \_\_\_\_\_ South, Range \_\_\_\_\_ East/West (circle one), \_\_\_\_\_ County, Kansas.
- (C) One in the \_\_\_\_\_ quarter of the \_\_\_\_\_ quarter of the \_\_\_\_\_ quarter of Section \_\_\_\_\_, more particularly described as being near a point \_\_\_\_\_ feet North and \_\_\_\_\_ feet West of the Southeast corner of said section, in Township \_\_\_\_\_ South, Range \_\_\_\_\_ East/West (circle one), \_\_\_\_\_ County, Kansas.
- (D) One in the \_\_\_\_\_ quarter of the \_\_\_\_\_ quarter of the \_\_\_\_\_ quarter of Section \_\_\_\_\_, more particularly described as being near a point \_\_\_\_\_ feet North and \_\_\_\_\_ feet West of the Southeast corner of said section, in Township \_\_\_\_\_ South, Range \_\_\_\_\_ East/West (circle one), \_\_\_\_\_ County, Kansas.

If the source of supply is groundwater, a separate application shall be filed for each proposed well or battery of wells, except that a single application may include up to four wells within a circle with a quarter (1/4) mile radius in the same local source of supply which do not exceed a maximum diversion rate of 20 gallons per minute per well.

A battery of wells is defined as two or more wells connected to a common pump by a manifold; or not more than four wells in the same local source of supply within a 300 foot radius circle which are being operated by pumps not to exceed a total maximum diversion rate of 800 gallons per minute and which supply water to a common distribution system.

6. The owner of the point of diversion, if other than the applicant is (please print):

Marcia E Maybrier Trust 1577 East 40th Ave North Belle Plaine  
(name, address and telephone number) 620 455 2295 Kansas

\_\_\_\_\_  
(name, address and telephone number) 67013

You must provide evidence of legal access to, or control of, the point of diversion from the landowner or the landowner's authorized representative. Provide a copy of a recorded deed, lease, easement or other document with this application. In lieu thereof, you may sign the following sworn statement:

I have legal access to, or control of, the point of diversion described in this application from the landowner or the landowner's authorized representative. I declare under penalty of perjury that the foregoing is true and correct.

Executed on May 3rd, 2014. Thomi M. Neider  
Applicant's Signature

The applicant must provide the required information or signature irrespective of whether they are the landowner. Failure to complete this portion of the application will cause it to be unacceptable for filing and the application will be returned to the applicant.

- 7. The proposed project for diversion of water will consist of ONE  
(number of wells, pumps or dams, etc.)  
and (was)(will be) completed (by) ASAP as Approved  
(Month/Day/Year - each was or will be completed)
- 8. The first actual application of water for the proposed beneficial use was or is estimated to be 06/1/2015  
(Mo/Day/Year)

WATER RESOURCES  
RECEIVED

MAY 12 2014

SCANNED

9. Will pesticide, fertilizer, or other foreign substance be injected into the water pumped from the diversion works?  
 Yes  No If "yes", a check valve shall be required.

All chemigation safety requirements must be met including a chemigation permit and reporting requirements.

10. If you are planning to impound water, please contact the Division of Water Resources for assistance, prior to submitting the application. Please attach a reservoir area capacity table and inform us of the total acres of surface drainage area above the reservoir. NA

Have you also made an application for a permit for construction of this dam and reservoir with the Division of Water Resources?  Yes  No

- If yes, show the Water Structures permit number here \_\_\_\_\_
- If no, explain here why a Water Structures permit is not required \_\_\_\_\_

11. The application must be supplemented by a U.S.G.S. topographic map, aerial photograph or a detailed plat showing the following information. On the topographic map, aerial photograph, or plat, identify the center of the section, the section lines or the section corners and show the appropriate section, township and range numbers. Also, please show the following information:

(a) The location of the proposed point(s) of diversion (wells, stream-bank installations, dams, or other diversion works) should be plotted as described in Paragraph No. 5 of the application, showing the North-South distance and the East-West distance from a section line or southeast corner of section.

(b) If the application is for groundwater, please show the location of any existing water wells of any kind within 1/2 mile of the proposed well or wells. Identify each existing well as to its use and furnish the name and mailing address of the property owner or owners. If there are no wells within 1/2 mile, please advise us: 3960 Feet West + 1320 Feet North of S.E. Corner of Section

(c) If the application is for surface water, the names and addresses of the landowner(s) 1/2 mile downstream and 1/2 mile upstream from your property lines must be shown. On Map Attached

(d) The location of the proposed place of use should be shown by crosshatching on the topographic map, aerial photograph or plat.

(e) Show the location of the pipelines, canals, reservoirs or other facilities for conveying water from the point of diversion to the place of use. NA

A 7.5 minute U.S.G.S. topographic map may be obtained by providing the section, township and range numbers to: Kansas Geological Survey, 1930 Constant, Campus West, University of Kansas, Lawrence, Kansas 66047.

12. List any application, appropriation of water, water right, or vested right file number that covers the same diversion points or any of the same place of use described in this application. Also list any other recent modifications made to existing permits or water rights in conjunction with the filing of this application. None

13. Furnish the following well information if the proposed appropriation is for the use of groundwater. If the well has not been completed, give information obtained from test holes, if available.

Information below is from:  Test holes  Well as completed  Drillers log attached

Well location as shown in paragraph No.	(A)	(B)	(C)	(D)
Date Drilled	_____	_____	_____	_____
Total depth of well	_____	_____	_____	_____
Depth to water bearing formation	_____	_____	_____	_____
Depth to static water level	_____	_____	_____	_____
Depth to bottom of pump intake pipe	_____	_____	_____	_____

14. The relationship of the applicant to the proposed place where the water will be used is that of

Tenant  
(owner, tenant, agent or otherwise)

15. The owner(s) of the property where the water is used, if other than the applicant, is (please print):

Marcia E. Maybrier 1577 East 40th Ave N. Belle Plaine, Kansas  
(name, address and telephone number) 620 455 3295 67013  
\_\_\_\_\_  
(name, address and telephone number)

16. The undersigned states that the information set forth above is true to the best of his/her knowledge and that this application is submitted in good faith.

Dated at Belle Plaine, Kansas, this 3rd day of May, 2014.

2. Please complete the following information for the description of the operation for the irrigation project. Attach supplemental sheets as needed.

a. Indicate the soils in the field(s) and their intake rates:

Soil Name	Percent of field (%)	Intake Rate (in/hr)	Irrigation Design Group
Dale + Reinach Silt Loams	90	.6-2.0	
Elanco Silty Clay Loam	10	.6-2.0	
Total:	100 %		

b. Estimate the average land slope in the field(s): .5 %  
 Estimate the maximum land slope in the field(s): 1.0 %

c. Type of irrigation system you propose to use (check one):

- Center pivot       Center pivot - LEPA       "Big gun" sprinkler  
 Gravity system (furrows)       Gravity system (borders)       Sideroll sprinkler  
 Other, please describe: \_\_\_\_\_

d. System design features:

i. Describe how you will control tailwater: NA

WATER RESOURCES RECEIVED

MAY 12 2014

ii. For sprinkler systems:

- (1) Estimate the operating pressure at the distribution system: 40 psi  
 (2) What is the sprinkler package design rate? 800 gpm  
 (3) What is the wetted diameter (twice the distance the sprinkler throws water) of a sprinkler on the outer 100 feet of the system? 2740 feet  
 (4) Please include a copy of the sprinkler package design information.

KS DEPT OF AGRICULTURE

e. Crop(s) you intend to irrigate. Please note any planned crop rotations:

Corn Soybeans Wheat

f. Please describe how you will determine when to irrigate and how much water to apply (particularly important if you do not plan a full irrigation).

will water based on crop need & soil moisture throughout the growing season

You may attach any additional information you believe will assist in informing the Division of the need for your request.

File #49,077

Reduced to 162 AF  
meets safe yield.

**Analysis Results**

The selected PD is in an area to new appropriations.  
The safe yield, based on the variables listed below is 1,924.76 AF.  
Total prior appropriation in the circle is 2,394.89 AF.  $\sim 632 = 1762.9$   
Total quantity of water available for appropriation is ~~0.00~~ AF.

**Safe Yield Variables**

162 AF

The area used for the analysis is set at 5703 acres.  
Potential annual recharge of the area is estimated to be 5.4 inches.  
The percent of recharge available for appropriation is 75%.

Authorized Quantity values are as of 15-JUN-2016 and are based on Appropriated and Vested ground water right and possible stream nodes for GMD #2. Domestic, Term and Temporary water rights have been excluded.

There are 17 water right(s) and 37 point(s) of diversion within the circle.

Re: Pending New Application, File No. 49,077

Dear Sir or Madam:

This is to advise you that Ronnie M. Neises has filed the application referred to above for a permit to appropriate 162 acre-feet of groundwater per calendar year for irrigation use to be diverted at a maximum rate of 800 gallons per minute from a well located as follows:

In the Northwest Quarter of the Northwest Quarter of the Southwest Quarter of Section 28, in Township 31 South, Range 2 East, in Sumner County, Kansas.

A map is enclosed indicating the location of the proposed point of diversion. Records in this office indicate that you may have a well or wells in this vicinity and you are being notified of receipt of this application in order that you may be fully informed of the proposed location of the applicant's point of diversion and proposed use of water. Consideration will be given to comments or other information which you desire to submit to this office **within 15 days** from the date of this letter.

If you have any questions or comments, you may also contact me at (785) 296-3495. If you call, please reference the file number so I can help you more efficiently.

Sincerely,

Douglas W. Schemm

WATER WELL RECORD Form WWC-5 KSA 82a-1212

1 LOCATION OF WATER WELL	Fraction	Section Number	Township Number	Range Number
County: SUMNER	SE 1/4 SE 1/4 SW 1/4	19	T 31 S	R 2 E EW

Distance and direction from nearest town or city? 2 Mi. E. of Belle Plaine, Ks., 4 S., 1/2 W., Belle Plaine, Ks. Street address of well if located within city?

2 WATER WELL OWNER: Theodore Nieses  
 RR#, St. Address, Box #: R. #2  
 City, State, ZIP Code: Belle Plaine, Ks.  
 Board of Agriculture, Division of Water Resources  
 Application Number:

3 DEPTH OF COMPLETED WELL: 40 ft. Bore Hole Diameter: 11 in. to ft., and in. to ft.  
 Well Water to be used as:  
 1 Domestic 3 Feedlot 5 Public water supply 8 Air conditioning 11 Injection well  
 2 Irrigation 4 Industrial 6 Oil field water supply 9 Dewatering 12 Other (Specify below)  
 7 Lawn and garden only 10 Observation well  
 Well's static water level: 20 ft. below land surface measured on 7 month 31 day 80 year  
 Pump Test Data: Well water was ft. after hours pumping gpm  
 Est. Yield gpm: Well water was ft. after hours pumping gpm

4 TYPE OF BLANK CASING USED:  
 1 Steel 3 RMP (SR) 5 Wrought iron 8 Concrete tile Casing Joints: Glued X Clamped  
 2 PVC 4 ABS 6 Asbestos-Cement 9 Other (specify below) Welded  
 7 Fiberglass Threaded  
 Blank casing dia: 5 in. to 20 ft. Dia in. to ft. Dia in. to ft.  
 Casing height above land surface: 12 in., weight lbs./ft. Wall thickness or gauge No: 200  
 TYPE OF SCREEN OR PERFORATION MATERIAL:  
 1 Steel 3 Stainless steel 5 Fiberglass 8 RMP (SR) 10 Asbestos-cement 11 Other (specify)  
 2 Brass 4 Galvanized steel 6 Concrete tile 9 ABS 12 None used (open hole)  
 Screen or Perforation Openings Are:  
 1 Continuous slot 3 Mill slot 5 Gauzed wrapped 8 Saw cut .06 11 None (open hole)  
 2 Louvered shutter 4 Key punched 6 Wire wrapped 9 Drilled holes 10 Other (specify)  
 7 Torch cut  
 Screen-Perforation Dia: 5 in. to 40 ft. Dia in. to ft. Dia in. to ft.  
 Screen-Perforated Intervals: From 20 ft. to 40 ft. From ft. to ft. From ft. to ft.  
 Gravel Pack Intervals: From 14 ft. to 40 ft. From ft. to ft. From ft. to ft.

5 GROUT MATERIAL: 1 Neat cement 2 Cement grout 3 Bentonite 4 Other  
 Grouted Intervals: From 40 ft. to 14 ft. From ft. to ft. From ft. to ft.  
 What is the nearest source of possible contamination:  
 1 Septic tank 4 Cess pool Septic System not installed at this time. 10 Fuel storage 14 Abandoned water well  
 2 Sewer lines 5 Seepage pit 7 Sewage lagoon 11 Fertilizer storage 15 Oil well/Gas well  
 3 Lateral lines 6 Pit privy 8 Feed yard 12 Insecticide storage 16 Other (specify below)  
 9 Livestock pens 13 Watertight sewer lines None Apparent  
 Direction from well: How many feet? Water Well Disinfected? Yes X No  
 Was a chemical/bacteriological sample submitted to Department? Yes No X If yes, date sample was submitted month day year Pump installed? Yes No X  
 If Yes: Pump Manufacturer's name Model No. HP Volts  
 Depth of Pump Intake ft. Pumps Capacity rated at gal./min.  
 Type of pump: 1 Submersible 2 Turbine 3 Jet 4 Centrifugal 5 Reciprocating 6 Other

6 CONTRACTOR'S OR LANDOWNER'S CERTIFICATION: This water well was (1) constructed, (2) reconstructed, or (3) plugged under my jurisdiction and was completed on 7 month 31 day 80 year  
 and this record is true to the best of my knowledge and belief. Kansas Water Well Contractor's License No. 236  
 This Water Well Record was completed on 10 month 7 day 1980 year under the business name of Harp Well & Pump by (signature) M. Arnold

## FEE SCHEDULE

1. The fee for an application for a permit to appropriate water for beneficial use, except for domestic use, shall be (see paragraph No. 2 below if requesting storage):

ACRE-FEET	FEE
0-100	\$200.00
101-320	\$300.00
More than 320	\$300.00 plus \$20.00 for each additional 100 acre-feet or any part thereof.

2. The fee for an application in which storage is requested, except for domestic use, shall be:

ACRE-FEET	FEE
0-250	\$200.00
More than 250	\$200.00 plus \$20.00 for each additional 250 acre-feet of storage or any part thereof.

Note: If an application requests both direct use *and* storage, the fee charged shall be as determined under No. 1 or No. 2 above, whichever is greater, but not both fees.

3. The fee for an application for a permit to appropriate water for water power or dewatering purposes shall be \$100.00 plus \$200.00 for each 100 cubic feet per second, or part thereof, of the diversion rate requested.

Note: The applicant shall notify the Chief Engineer and pay the statutorily required field inspection fee of \$400.00 when construction of the works for diversion has been completed, except that for applications filed on or after July 1, 2009, for works constructed for sediment control use and for evaporation from a groundwater pit for industrial use shall be accompanied by a field inspection fee of \$200.00.

### MAKE CHECKS PAYABLE TO THE KANSAS DEPARTMENT OF AGRICULTURE

#### ATTENTION

A Water Conservation Plan may be required per K.S.A. 82a-733. A statement that your application for permit to appropriate water may be subject to the minimum desirable streamflow requirements per K.S.A. 82a-703a, b, and c may also be required from you. After the Division of Water Resources has had the opportunity to review your application, you will be notified whether or not you will need to submit a Water Conservation Plan. You also may be required to install a water flow meter or water stage measuring device on your diversion works prior to diverting water. There may be other special conditions or Groundwater Management District regulations that you will need to comply with if this application is approved.

#### CONVERSION FACTORS

1 acre-foot equals 325,851 gallons

1 million gallons equal 3.07 acre-feet

RE: Application  
File No. 49,077

Dear Sir or Madam:

Your application for permit to appropriate water in 28-31S-2E, in Sumner County, was received and has been assigned the file number noted above.

As a matter of record, the Division of Water Resources has on hand a large number of applications awaiting processing. Therefore to be fair to all concerned, and so that we can process those applications on hand in the order they were received, we intend to concentrate on the backlog of applications until the issue is resolved. Once review of your application has begun, we will contact you, if additional information is required.

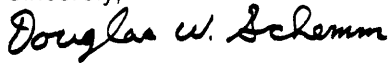

In accordance with the provisions of the Kansas Water Appropriation Act, a portion of which is included below, the use of water as proposed prior to approval of the application is unlawful. Once approved, compliance with the terms, conditions and limitations of the permit is necessary. Conservation of the water resources of Kansas is required.

**Section 82a-728 of the Kansas Water Appropriation Act, provides (a) except for the appropriation of water for the purpose of domestic use, . . . it shall be unlawful for any person to appropriate or threaten to appropriate water from any source without first applying for and obtaining a permit to appropriate water in accordance with the provisions of the Water Appropriation Act or for any person to violate any condition of a vested right, appropriation right or an approved application for a permit to appropriate water for beneficial use.**

**(b) (1) The violation of any provision of this section by any person is a class C misdemeanor . . .**

**A class C misdemeanor is punishable by a fine not to exceed \$500 and/or a term of confinement not to exceed one month in the county jail. Each day that the violation occurs constitutes a separate offense.**

If you have any questions, please contact our office. If you wish to discuss a specific file, please have the file number ready so that we may help you more efficiently.

Sincerely,  
  
Douglas W. Schemm  
New Application Unit Supervisor  
Water Appropriation Program

RE: Pending Application, File No. 49,077

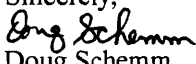

Dear Mr. Neises:

We have conducted a preliminary review of your application referenced above based on the information received in our office on May 12, 2014. The application is requesting to appropriate 200 acre-feet of groundwater for irrigation use on 132 acres. The source of water for the pending application is alluvial deposits, based on the geographical location of the well, and nearby well logs. Based on a review of the 2004 United States Geological Survey report, the Division of Water Resources has established a value of 5.4 inches for calculated recharge, with 75% of the calculated recharge available for appropriation within the Lower Arkansas River valley. Per K.A.R. 5-3-11(d)(1), the safe yield area of consideration represents the portion of the two-mile circle located within the limit of the unconfined aquifer expressed in acres (4,589 acres for this file). Calculated recharge is 5.4 inches, and as noted above within the Lower Arkansas River Valley 75 percent of the calculated recharge can be considered to be available for appropriation.

As we discussed, a review of safe yield at your proposed point of diversion located near the center of the Southwest Quarter of Section 28, in Township 31 South, Range 2 East, Sumner County, Kansas indicates no water is available. However, an alternative location described as a point in the Southwest Quarter of the Southwest Quarter of the Southwest Quarter of Section 28, more particularly described as being near a point 323 feet North and 4,643 feet West of the Southeast corner of said section, in Township 31 South, Range 2 East, Sumner County, Kansas, indicates that **86 acre-feet would be available (see map)**.

Per K.A.R. 5-3-11(c)(2) if there is sufficient water available to reasonably satisfy part of the request, then the application shall be approved for the quantity available if the remaining quantity is reasonable for the proposed use. Therefore, if you elect to pursue your proposed irrigation project based on the information presented above, the quantity you requested on Application, File No. 49,077 **must be reduced to 86 acre-feet**, and you must also reduce your proposed place of use acreage to ensure that this quantity of 86 acre-feet is reasonable for the proposed use. In order to comply with K.A.R. 5-3-19, for Sumner County, the maximum reasonable annual quantity of water for irrigation use is 1.3 acre-feet per acre. With your reduced quantity of 86 acre-feet, this would equate to a maximum of approximately **66 acres** that could be irrigated. Please revise both the enclosed topographic map, and the "Irrigation Use Supplemental Sheet" to depict this reduced acreage. Please initial any changes you make on these attachments, and return the originals to our office when completed.

We are advising you of this recommendation in order to allow you an opportunity to submit additional information to show why our evaluation should be reconsidered. You have a period of 30 days (**until January 29, 2016**) to either (1) submit additional information to our office or (2) request additional time beyond the 30 days to submit additional information. If you wish to request additional time, you must do so **in writing**, before the 30 day period expires. Such a request should state what steps are being taken to obtain the information and the amount of time you will need to supply the information to our office. Any relevant credible information submitted within the time allowed will be given due consideration, prior to final action on the application. If you have any questions, please contact me at (785) 296-3495. If you wish to discuss a specific file, please have the file number ready so that I may help you more efficiently.

Sincerely,  
  
Doug Schemm  
Environmental Scientist  
Topeka Field Office

# 49,077  
 Initial Safe Yield  
 (4/20/16)

**Analysis Results**

The selected PD is in an area to new appropriations.  
 The safe yield, based on the variables listed below is 1,858.95 AF.  
 Total prior appropriation in the circle is 2,394.89 AF.  $-632 = 1762.9$   
 Total quantity of water available for appropriation is 0.00 AF.

96 AF

**Safe Yield Variables**

The area used for the analysis is set at 5508 acres.  
 Potential annual recharge of the area is estimated to be 5.4 inches.  
 The percent of recharge available for appropriation is 75%.

Authorized Quantity values are as of 20-APR-2016 and are based on Appropriated and Vested ground water right and possible stream nodes for GMD #2. Domestic, Term and Temporary water rights have been excluded.

There are 17 water right(s) and 37 point(s) of diversion within the circle.

Revised pd to  
(323'N + 4643'W)

**Analysis Results**

The selected PD is in an area to new appropriations.  
The safe yield, based on the variables listed below is 1,548.79 AF.  
Total prior appropriation in the circle is 1,925.89 AF. - 463 = 1462.89  
Total quantity of water available for appropriation is ~~0.00 AF~~

86AF

**Safe Yield Variables**

The area used for the analysis is set at 4589 acres.  
Potential annual recharge of the area is estimated to be 5.4 inches.  
The percent of recharge available for appropriation is 75%.

Authorized Quantity values are as of 21-DEC-2015 and are based on Appropriated and Vested ground water right and possible stream nodes for GMD #2. Domestic, Term and Temporary water rights have been excluded.

There are 14 water right(s) and 34 point(s) of diversion within the circle.

## 1.0 CONCLUSIONS

1. Aquifer at the Neises farm site is Illinoisan or Kansan terrace deposits. Saturated thickness of the aquifer is approximately 20 feet at the test well site. The aquifer is unconfined.
2. Transmissivity of the aquifer is estimated to range from 13,000 to 19,000 gpd/ft based on the distance drawdown graph and early the data on the time drawdown graph (Test Well 01-06). Transmissivity of the aquifer will vary from location to location due to variations in amount of clay and silt present in the aquifer.
3. Specific capacity of test well was 9.33 gpm/ft at conclusion of 24-hour aquifer test. Well efficiency of the test well was 72.89 percent. Installing a properly designed irrigation well will increase the well efficiency and, therefore, increase the specific capacity of a well to approximately 12.8 gpm/ft.
4. Distance drawdown graph shows radius of influence to be approximately 200 feet based on the 24-hour aquifer test conducted at the test well site. The proposed point of diversion will not impair the nearby domestic well.
5. Based on the Servi-Tech Laboratories irrigation water lab analysis, the groundwater is excellent quality irrigation water.

## 2.0 RECOMMENDATIONS

1. Submit report to Division of Water Resources.
2. Reduce maximum pumping rate of the battery of four wells to 400 gallons per minute (100 gpm per irrigation water well).
3. A qualified individual should design all irrigation wells installed at the site.
4. Screened interval of irrigation wells installed at the site should be less than 50 percent of the saturated thickness of the aquifer.
5. Pumping water level in the irrigation water wells must be maintained above the screened interval of the aquifer.

### 3.0 INTRODUCTION

#### 3.1 GENERAL

Water right file number 46,145 is located in the NENESE Section 30, Township 31 South, Range 2 East, Sumner County, Kansas. Priority date of the water right is January 21, 2005. Permit application requested a maximum quantity of water of 169 acre-feet. A maximum rate of 800 gallons per minute was requested in the permit application for a battery of four wells.

Division of Water Resources suspended application based on potential impairment of prior water right (nearby domestic well) for comments from applicant on January 27, 2006. Applicant proposed conducting a pumping test in letter dated February 24, 2006.

Proposed site is within the Ninnescah River Basin. Aquifer at the site consists of Illinoian and/or Kansas terrace deposits, which generally yields moderate quantities of water to wells. These deposits generally consist of poorly sorted sand and gravel, containing varying amounts of silt and clay. The aquifer is unconfined. Bedrock at the site is the Wellington Formation.

#### 3.2 INITIATION

In a phone conversation on April 28, 2006, Mr. Jim Neises retained Bittersweet Energy, Inc. to review available data and conduct site specific investigation to determine if a battery of four wells would impair nearby senior water right (domestic well).

#### 3.3 PURPOSE OF STUDY

To determine impact of the proposed point of diversion (water right file # 46,145) on nearby senior water right (domestic well) by conducting an aquifer test.

#### 3.4 SCOPE AND CONDITIONS OF STUDY

Reviewed available publications for general information pertinent to the project. Supervised installation of four test holes to confirm aquifer descriptions and collected samples for sieve analysis. Installed test well and three observation wells. Conducted a 24-hour aquifer test to evaluate aquifer characteristics and radius of influence of a pumping well at the proposed point of division.

Project was delayed waiting on a water well contractor. Also, winter weather (snow storms) delayed installation of test well and observation wells and the 24-hour aquifer test.

### 4.0 PREVIOUS WORK

Bulletin 151, "Geology and ground-water resources of Sumner County, Kansas" was authored by Kenneth L. Walters and published by the Kansas Geological Survey in 1961. Also, Scientific

Investigations Report 2004 – 2005, published by the U. S. Geological Survey and Soil Survey of Sumner County, Kansas, prepared by the USDA were used as references. The author of this report is not aware of any site-specific hydrological investigations.

## 5.0 PROCEDURES

Available publications, Kansas Geological Survey website, and available site-specific information (boring logs, etc.) were reviewed. Four test holes, a test well, and three observation wells were installed at the site by Clarke Well & Equipment, Inc. (licensed water well contractor). Field geologist (Tom Hansen) described drilling samples and prepared boring logs. The test well and observation wells were completed using PVC screen, PVC casing, gravel pack, and a bentonite seal. Each observation well was developed using compressed air for at least 1 hour. A 24-hour aquifer test and 2-hour recovery was conducted on the test well installed at the site. A water sample was collected near the conclusion of the pumping test. Water sample was sent to Servi-Tech Laboratories for analysis. Test holes were plugged from total depth to surface with bentonite.

## 6.0 RESULTS

Aquifer test data collected during the 24-hour pumping test and time-drawdown curves are presented in Appendix A. Also, in Appendix A is distance-drawdown graph. Boring logs for the test holes, test well, and observation wells installed during this investigation are shown in Appendix B. Laboratory report prepared by Servi-Tech Laboratories of the water sample collected from test well and a sieve analysis conducted by Geotechnical Services, Inc. are presented in Appendix C. A well schematic of the test well is shown Appendix D. Appendix E contains a site map. Results of sieve analysis are shown in Appendix F.

## 7.0 DISCLOSURE AND DISCLAIMER

This report and the opinions, interpretations and analysis contained therein, are based upon the author's examination and interpretation of numerous technical matters including aquifer test, lab analysis, maps, and publications, the accuracy and reliability of which is not guaranteed by this report. This report is only to be utilized by the party to whom it is addressed and may not be relied upon by any other party. This report must be utilized in its entirety and portions of it may not be extracted.

The author of this report is not responsible for any extractions, extrapolations, or other use of the report not specifically authorized by the author, and in no event shall the author be liable for any loss or damage resulting from the use of or reliance upon the report.

The author of this report is an independent consulting geologist, retained by Mr. Jim Nels <sup>2008</sup> to supervise installation of test holes, test well, observation wells, and a 24-hour aquifer test at his farm site located in Sumner County, Kansas.

The author of this report holds a Bachelor of Science degree in Geology and Masters of

Science degree in Groundwater from Kansas State University, has practiced his geological profession for 38 years, and has been designated Certified Professional Geological Scientist (Certificate Number 3339) by the American Institute of Professional Geologists and Certified Petroleum Geologist (Certificate Number 1918) by the American Association of Petroleum Geologists. Also, is a licensed geologist in the State of Kansas (Lic. # 020) and the State of Missouri (Lic. # 0700).

## 8.0 DISCUSSION

The Neises farm site is located (SE/4 Section 30, Township 31 South, Range 2 East) in Sumner Co., Kansas. Sumner County is located in the Wellington Lowland and the Arkansas River Lowlands of the Central Lowland physiographic province. The annual precipitation is 33.95 inches. Soils at the site are in the Farnum-Vanoss-Bethany association. The soils are deep, well drained, and moderately permeable. Slopes range from zero to 6 percent. Soils are classified as Vanoss silt loam. Parent material for the soils are colluvium or pediment deposits, which are underlain by Kansan and Illinoisan terrace deposits and Wellington Shale.

At the Neises farm site colluvium is present at the surface. The colluvium was formed by weathering of the Permian shales in place and by deposition of silt, clay, and sand by sheet wash. It sometimes yields small quantities of water in Sumner County. Below the colluvium are Kansas and Illinoisan terrace deposits. The terrace deposits are comprised of sand and gravel with some clay overlying the Wellington Shale. These terrace deposits yield moderate quantities of water to wells in Sumner County.

Four test holes, three observation wells, and a test well (Appendix E – Site Map) were installed during field operations (December 14 – 16, 2006) at the Neises farm site. Clarke Well and Equipment, Inc. (licensed water well contractor) installed the test holes, observation wells, and test well using a rotary rig. Samples of drill cuttings (5-foot intervals) were collected at each site and placed in Ziploc bags. Each bag was labeled showing well ID; date sample was collected, and sample depth. Drill cuttings will be saved until project is completed. Geologist (Tom Hansen) described drill cuttings during drilling operations at each drill site. Lithologic descriptions are presented in Appendix B. Sieve analysis were performed on selected drill cuttings from test hole 03-06 and test hole 04-06 by Geotechnical Services, Inc. Results of the sieve analysis are presented in Appendix F.

Depth to bedrock (Wellington Shale) at the Neises Farm site varies from approximately 47 feet (TH 01-06) to 59 feet (OB 03-06). The Wellington Shale dips to the west about 15 to 20 feet per mile. Static water level varies from approximately 25 feet to 35 feet below ground level at the site. Based on Plate 2 Bulletin 151 (Appendix E) ground water flow at the site is generally in a east to northeast direction.

The test well was installed on December 15, 2006, by Clarke Well & Equipment, Inc. A 9-inch borehole was drilled. Five inch screen was set from 42' to 54'. Casing was set from two feet above ground level to 42'. Three centralizers were placed at bottom of screen and at the top of the screen. Test well was gravel packed from total depth to twenty feet. Annulus was sealed with bentonite from surface to 20 feet below ground level. Test well was developed using a bailer. The bailer volume was 9.9 gallons. Test well was bailed for approximately 1.3 hours. Approximately 1700 gallons of water were removed from the test well using the bailer. Test well was further developed using compressed air

MICROFILMED

for approximately 2.4 hours. The 2-inch observation wells were developed for approximately 1.5 hours using compressed air.

On January 24, 2007, the test well was further developed using a submersible pump prior to beginning the 24-hour aquifer pumping test. Winter snowstorms delayed the scheduling of the aquifer test. Approximately 8 inches of snow underlain by approximately 2 inches of sleet covered the test site. Daytime temperatures were in the low 30's during the aquifer test. A circular orifice weir with a 2.5-inch orifice plate was used to measure flow rate during the pumping test. An aquifer step-drawdown test was conducted to determine the maximum flow rate to be used during the aquifer pumping test. The step-drawdown test began at 8:55 am on January 24, 2007, at a pumping rate of 55 gallons per minute for 45 minutes. The pumping rate was then increased to 75.5 gallons per minute for 45 minutes and then to 100.8 gallons per minute for 45 minutes. At the end of the step-drawdown test the well was surged 5 to 6 times to further develop the test well. Drawdown measurements were recorded during the step-drawdown test (Appendix A). Also, a 55-gallon barrel test was used to check the flowrate during each phase of the step-drawdown test.

The 24-hour aquifer test was started at 12:45 pm on January 24, 2007. A pumping rate of 86 gallons per minute was selected to assure the pumping water level did not reach the top of the submersible pump. Drawdown measurements were recorded in the test well and three observation wells during the aquifer test (Appendix A). The observation wells were located 35 feet, 165 feet, and 600 feet in a southeasterly direction from the test well.

Drawdown data vs. time was plotted on graph paper to determine transmissivity and radius of influence of test well. Graphs are presented in Appendix A. Transmissivity of the aquifer based on the 24-hour aquifer test is estimated to range from approximately 13,000 to 19,000 gpd/ft based on distance drawdown graph and TW 01-06 time drawdown graph. Time drawdown graphs using recovery data indicate transmissivity ranges from approximately 50,000 to 59,000 gpd/ft. Radius of influence is approximately 200 feet based on distance drawdown graph. Also, the specific capacity is 9.33 gpm/ft based on the aquifer test. The well efficiency of the test well is 72.89 percent based on the distance drawdown graph. Specific capacity of a 100 percent efficient well should be approximately 12.8 gpm/ft. Transmissivity calculated from specific capacity assuming a 100 percent efficient water well is 19,196 gpd/ft, which supports transmissivity calculations based upon the distance drawdown graph and TW 01-06 time drawdown graph.

Based on the 24-hour aquifer test, a battery of four wells installed at the proposed point of diversion (water right file # 46,145) should be pumped at a rate not to exceed 400 gallons per minute. Also, the battery of 4 wells (water right file # 46,145) will not impair the nearby domestic water well.

## 9.0 ACKNOWLEDGEMENTS

**Jim Neises Project  
SE/4 Section 30, T31S, R2E  
Sumner County, Kansas**

Test Hole 1-06  
SESE Sec. 30, T31S, R2E  
December 14, 2006

0 - 3'	Topsoil, brown to reddish brown
3 - 8'	Clay, brown, slightly sandy, very fine to fine grained
8 - 11'	Clay, silty, reddish brown, small amount of sand, very fine to fine grained
11 - 12'	Sandy clay, brown, trace gravel
12 - 15'	Sand, fine to medium grained, gravel, fine, clayey
15 - 17'	Clay, light brown
17 - 21'	Sand with clay stringers, medium to coarse grained, some gravel
21 - 31'	Clay, gray, soft, with sand stringers, fine to medium grained
31 - 36'	Clay, dark gray, yellowish red brown, light brown
36 - 47'	Gravel, fine, sand, fine to medium grained, some coarse grained
47 - 53'	Clay, light gray to dark gray, firm
53 - 60'	Weathered shale, dark gray to bluish gray

Filled hole with sand to 20 feet, 1 bag of Holeplug at 50 feet  
Holeplug surface to 20 feet

Test Hole 2-06  
NENESE Sec. 30, T31S, R2E  
December 14, 2006

0 - 2'	Topsoil, reddish brown
2 - 14'	Clay, reddish brown to brown, slightly silty
14 - 21'	Clay, reddish brown with sand stringers, medium to coarse grained
21 - 25'	Sand and gravel, medium to coarse grained, fine gravel, with clay stringers
25 - 31'	Clay, light yellowish brown, with sand stringers, medium to coarse grained, small amount of gravel
31 - 37'	sand and gravel

Lost circulation, mixed 1 pit of mud, did not regain circulation, moved 5 feet west to drill TH 03-06

Filled hole with sand to 22 feet  
Holeplug surface to 22 feet

0 - 2'	Topsoil, reddish brown
2 - 17'	Clay, silty, reddish brown to brown, slightly sandy, very fine to fine grained
17 - 21'	Clay, light yellowish brown, with sand stringers, fine to coarse grained
21 - 35'	Sand, medium to coarse grained, with some fine gravel, clay stringers, light grayish brown
35 - 41'	Sand, fine to medium grained, some coarse
41 - 53'	Gravel, fine to medium, sand, fine to very coarse grained, with some clay stringers, increase in clay from 45 to 50 feet
53 - 56'	Weathered shale, olive gray
56 - 58'	Weathered shale, dark gray to bluish gray

Filled hole with sand from total depth to 21 feet  
Holeplug 21 feet to surface

Test Hole 4-06  
NWNWSE Sec. 30, T31S, R2E  
50 feet south of fence, 52 feet west of fence  
December 14, 2006

0 - 4'	Topsoil, reddish brown
4 - 7'	Clay, brown
7 - 25'	Sand, fine to coarse grained, some fine gravel, clay stringers, yellowish brown
25 - 32'	Sand, fine grained, some medium grained
32 - 33'	Clay, tan
33 - 36'	Sand, fine grained, with clay stringers
36 - 41'	Clay, light reddish brown, soft, with some sand, fine grained
41 - 43'	Sand, fine to medium grained, some fine gravel, clay stringers, light reddish brown, light gray
43 - 56'	Sand, medium to coarse grained, gravel, fine to medium
56 - 60'	Weathered shale, yellowish brown, olive gray, color change at 60 feet, dark gray to bluish gray

Left hole open to measure water level, hole collapsed at 21 feet  
Holeplug from 21 feet to surface

## LABORATORY REPORT

Report Date: 01/30/2007 03:59 pm

### Interpretations for Corrosive Indices

**NON-CORROSIVE:** A positive Langlier Index indicates that the water is non-corrosive and tends to deposit scale on the inside of pipes.

The Langlier Index and Aggressive Index can be used as indicators of the potential corrosivity of water. Other factors that affect corrosivity may be present and not included in this test.

### Interpretations For Irrigation Use

**WATER QUALITY RATING - EXCELLENT QUALITY IRRIGATION WATER**

**SALINITY HAZARD: VERY LOW.**

**PERMEABILITY HAZARD: VERY LOW.**

**BORON HAZARD - NONE:** Safe for nearly all crops.

**CHLORIDE HAZARD FROM SPRINKLER IRRIGATION- LOW:** Considered satisfactory to plant growth and development.

**pHc:** pHc values above 8.4 indicate a tendency to dissolve lime from soil through which the water moves; values below 8.4 indicates a tendency to precipitate lime from water applied.

### NELAC Certification

The test results included in this report meet all the requirements of NELAC unless otherwise noted and apply only to the sample that was tested. This report may not be reproduced, except in full, without written permission of the laboratory.

RE: Application  
File No. 49,077

Dear Sir or Madam:

Your application for permit to appropriate water in 28-31S-2E, in Sumner County, was received and has been assigned the file number noted above.

As a matter of record, the Division of Water Resources has on hand a large number of applications awaiting processing. Therefore to be fair to all concerned, and so that we can process those applications on hand in the order they were received, we intend to concentrate on the backlog of applications until the issue is resolved. Once review of your application has begun, we will contact you, if additional information is required.

In accordance with the provisions of the Kansas Water Appropriation Act, a portion of which is included below, the use of water as proposed prior to approval of the application is unlawful. Once approved, compliance with the terms, conditions and limitations of the permit is necessary. Conservation of the water resources of Kansas is required.

**Section 82a-728 of the Kansas Water Appropriation Act, provides (a) except for the appropriation of water for the purpose of domestic use, . . . it shall be unlawful for any person to appropriate or threaten to appropriate water from any source without first applying for and obtaining a permit to appropriate water in accordance with the provisions of the Water Appropriation Act or for any person to violate any condition of a vested right, appropriation right or an approved application for a permit to appropriate water for beneficial use.**

**(b) (1) The violation of any provision of this section by any person is a class C misdemeanor . . .**

**A class C misdemeanor is punishable by a fine not to exceed \$500 and/or a term of confinement not to exceed one month in the county jail. Each day that the violation occurs constitutes a separate offense.**

If you have any questions, please contact our office. If you wish to discuss a specific file, please have the file number ready so that we may help you more efficiently.

Sincerely,

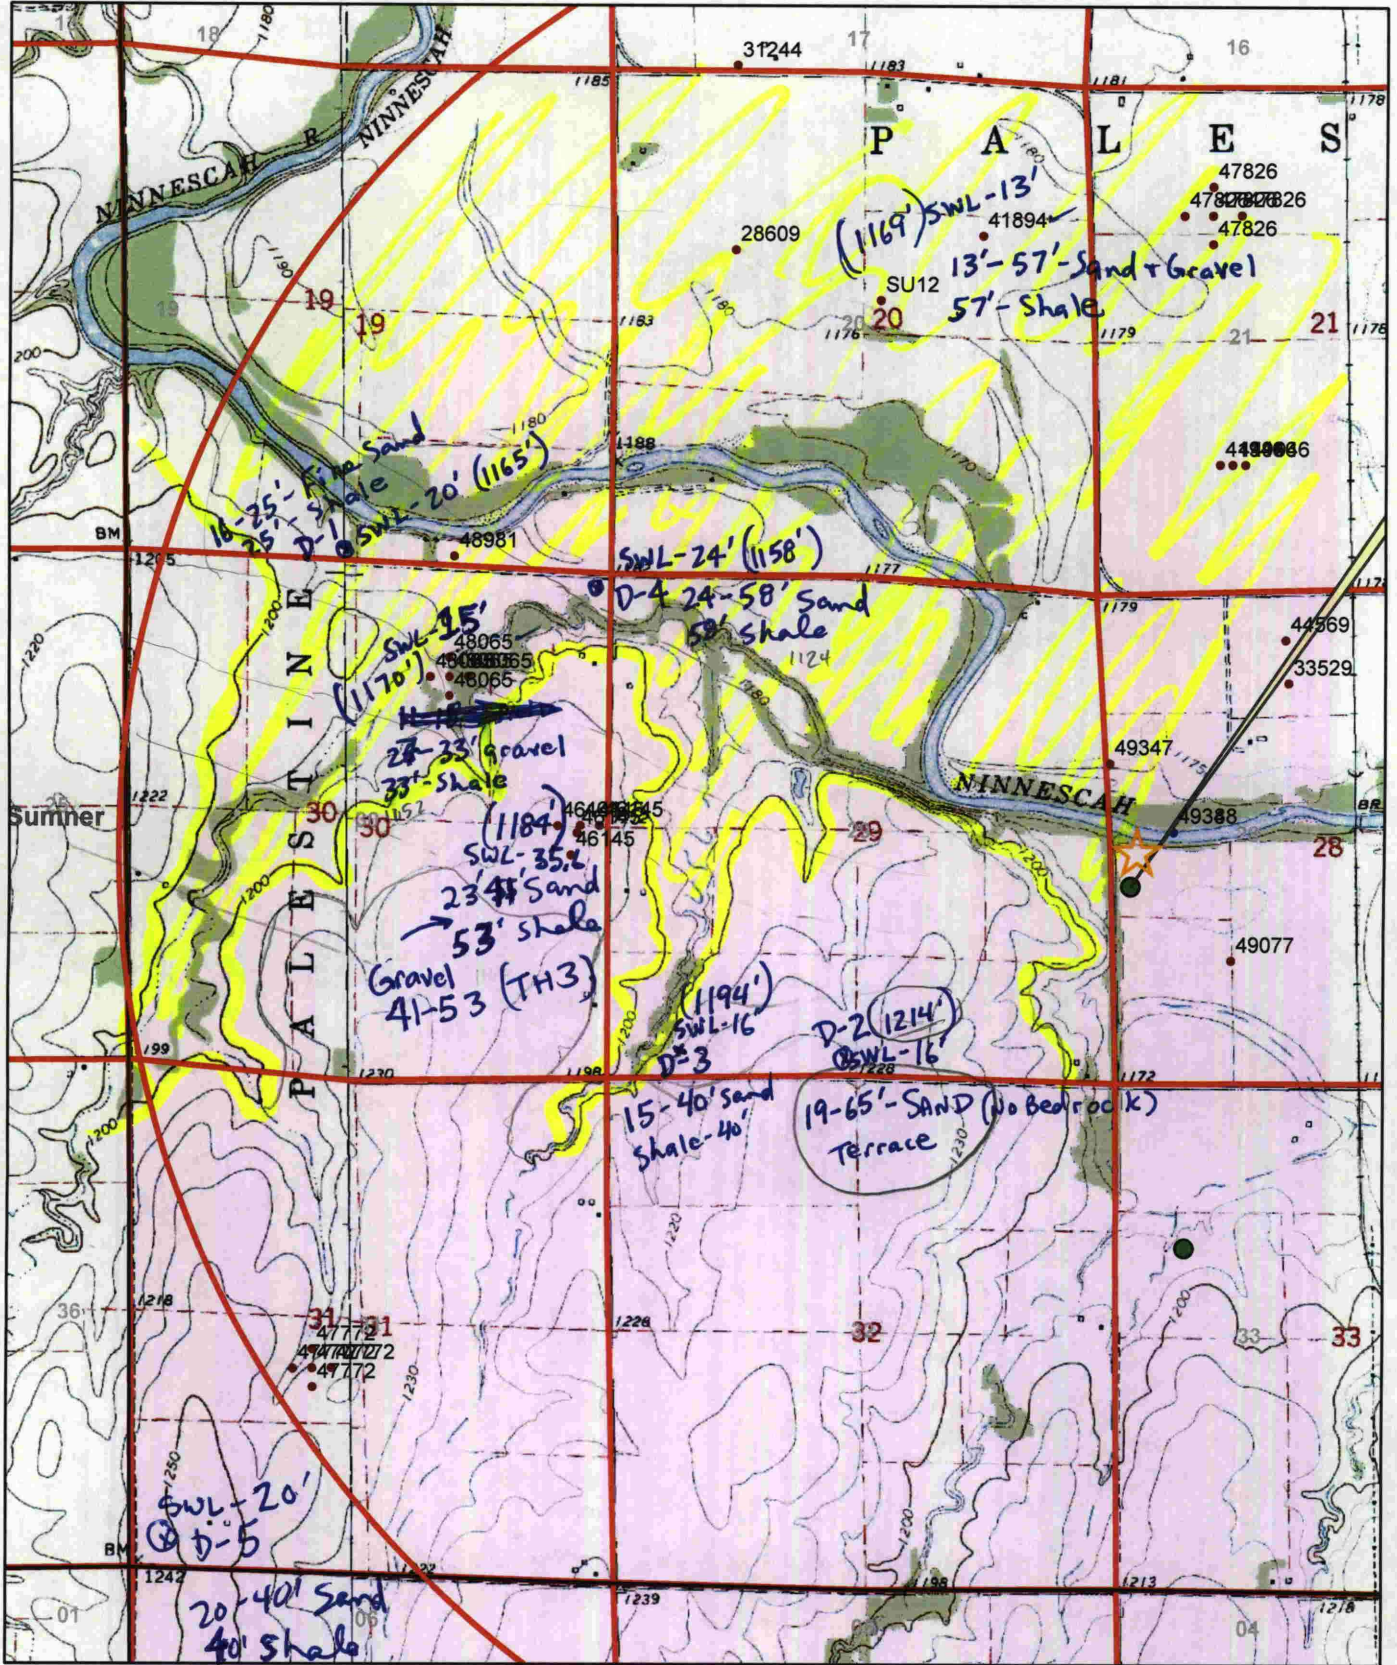

Douglas W. Schemm  
New Application Unit Supervisor  
Water Appropriation Program
