Steve,

I get the differences as 900 AF for the last 5 years for Nebraska pumping impacts and only 20 AF for the mound credits. The Nebraska pumping impact differences for Harry Strunk trend from approx. 900 AF in 1981 to approx. 1300 AF in 2000. For some reason the South Fork is 300-400 AF less???? There are also minor differences in Medicine itself and the Main stem (above Swanson).

David
