

## KDA-DWR Report

### Official Review of a Water Conservation Area (WCA)

Kleysteuber Farms WCA; Finney, KS

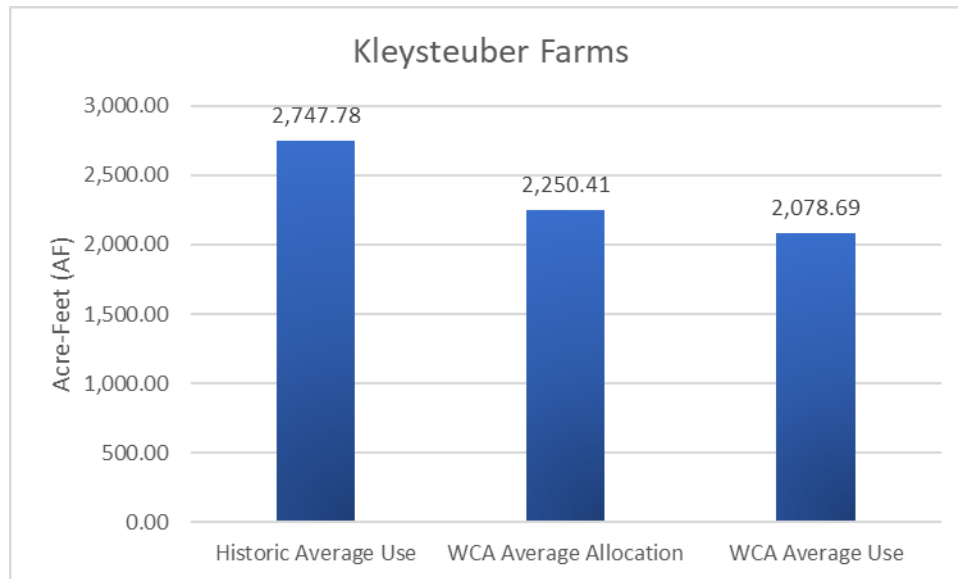

January 2018 through December 2022

***Review of Total Water Use of Water Rights Enrolled:***

During the term of this WCA, water use was limited to 11,252.055 acre-feet (AF) for Irrigation use. The total water use reported annually, under the listed water rights, during the term of this WCA are as follows:

2018 Water Use (AF)	2019 Water Use (AF)	2020 Water Use (AF)	2021 Water Use (AF)	2022 Water Use (AF)	Total WCA Water Use (AF)	Unused WCA Water Allocation (AF)	Total WCA Limit (AF)
2,024	1,802	2,347	1,725.28	2,495.15	11,107.43	144.63	11,252.055

The total average use during this WCA was 2,078.69 acre-feet.

***Review of Corrective Control Provisions:***

This WCA had 22 Irrigation wells within its geographic boundaries. Requested flexibilities included a multi-year allocation for all wells combined, a two well group allocation, and a multi-year allocation for a smaller subset of wells. This subset of wells with were limited to a 5-year allocation of 3,080.45 acre-feet with a total water use reported of 0 acre-feet, a savings of 100% from this subset group of wells. Overall, no corrective controls were exceeded.

No adverse impacts have been noted and no concerns were received from nearby well/landowners.

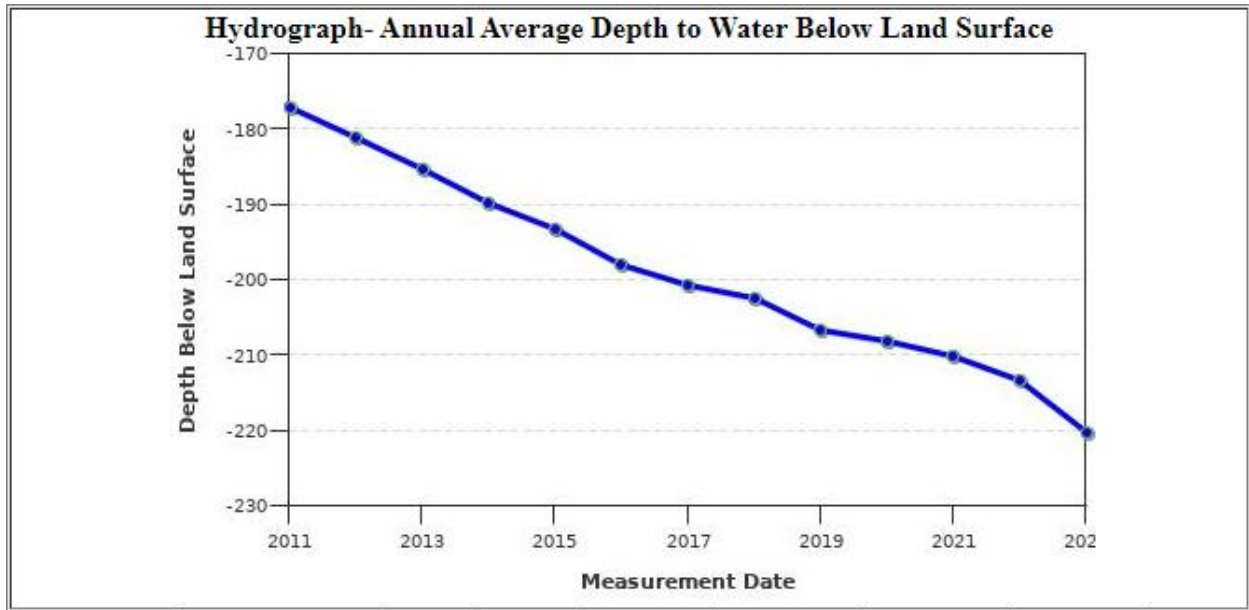

***Review of Compliance Monitoring and Enforcement:***

During the period of this WCA, there were no compliance issues relating to the water rights and corrective controls of the management plan. However, a term permit was requested and approved that allowed borrowing of unused allocation within the previously referred two well grouped allocation.

***Review of Water Level Changes:***

Below are the nearby observation wells documented in the management plan. Note that the measurements were taken annually in the early calendar months.

Location:  
15BCC-26S-31W

***Review of Economic Impacts:***

No official economic reports have been published at this time.

***Review of Public Interest:***

The WCA has conserved water, thereby extended the useable life of the Ogallala Aquifer in the Regional area, and served the public interest.

***Summary of Review by KDA-DWR:***

It is determined that this WCA has met its goals throughout the designated term. This WCA conserved an additional 1% of its WCA allocation; thereby saving water beyond the agreed original WCA reduction. The owners of this WCA met all requirements of the WCA Consent Agreement and Order. In summary, we see no need to deny a request from the owner(s), should they request another WCA for another term.
